Hospitals and outpatient surgery centers around the world are challenged to increase cost efficiency and extend their case mix to include demanding procedures, such as vascular interventions. The Ziehm Vision FD is the right answer. The C-arm with flat-panel detector has proven itself in the market for over ten years. In the upgraded CMOSline³ version, it features the latest technology for excellent image quality and – thanks to its liquid cooling system – is designed for continuous use. In addition, finely tuned workflows and new software features help optimize patient outcomes and increase productivity further. And the enhanced SmartDose Concept optimizes safety for surgeons, staff and patients.
01/ Trust in over 10 years of flat-panel performance – enhanced with latest imaging technology

In 2006, Ziehm Imaging presented the first-to-market mobile flat-panel C-arm. The Ziehm Vision FD marked a paradigm shift in innovative detector technologies to support surgery. Building on over ten years of experience and proven performance, Ziehm Imaging is pushing the boundaries even further by integrating CMOS technology into this system. This new standard for state-of-the-art intraoperative visualization delivers excellent image quality while increasing surgical safety and efficiency.

→ CMOS flat-panel technology

The latest flat-panel technology on the market, CMOS combines the cost efficiencies of image intensifier systems with the image quality of conventional FD technologies. Highlights include lower noise levels and enhanced dose management – all of which help surgeons to improve image quality and overall performance compared with conventional C-arms. With CMOS technology true resolution, especially in magnification modes, makes interpolation unnecessary and improves overall efficiency.

→ Bigger flat-panel detector as an option

While the Ziehm Vision FD CMOS line comes with a 20.5 cm x 20.5 cm CMOS detector, the system is now also available with a 31 cm x 31 cm a-Si flat-panel. The bigger detector size allows to cover larger anatomical regions in orthopedic and vascular surgery.
Extend the clinical case mix with enhanced cooling capabilities

A variety of patient needs and growing competition between hospitals call for increasingly innovative imaging functionality, capable of supporting a wide range of procedures. Featuring advanced pulse and cooling technologies, the Ziehm Vision FD is designed for a broad application spectrum, while ensuring excellent image quality even in demanding interventions. These advanced capabilities allow hospitals to successfully extend their clinical capabilities.

→ Sharp pulses for sharper images
The Ziehm Vision FD comes with a highly compact monoblock generator. It produces short, sharp pulses for crystal-clear images even if the patient is moving. This intelligent pulse technology allows to reduce the pulse rate while minimizing dose (as illustrated below).

→ Prolonged use
C-arms need to be in continuous use during lengthy, demanding procedures such as vascular interventions. The Ziehm Vision FD is ideal for these applications. Its Advanced Active Cooling (AAC) system keeps the generator at an optimum operating temperature. In the event of a temperature increase, the pulse frequency is automatically reduced until the generator’s temperature has cooled down.

Sophisticated system to avoid generator overheating
Advanced Active Cooling keeps generator temperature down through automatic adaptation of the pulse rate combined with a powerful liquid cooling system.

Ziehm Imaging’s monoblock generator
Compared with continuous fluoroscopy
Short, sharp pulses minimize dose and maximize image quality.
03/Benefit from seamless integration with finely tuned workflows

Heavy case loads and a large number of different users call for a highly standardized operating concept. The Ziehm Vision FD offers a number of hardware enhancements that support handling and improve ergonomics further. Seamlessly integrated workflows ensure consistently high and predictable quality levels, thus ensuring optimal patient outcomes.

Best-in-class ergonomics
With a footprint of 0.8 m², the Ziehm Vision FD is one of the smallest C-arms on the market. The big C-arm opening and 165 degrees of orbital movement ideally support the workflow and provide easier patient coverage. In addition, different-colored scales and handles allow the surgeon and staff to quickly and simply select the desired function.

Intuitive workflow
The Vision Center is a rotating and tilting touchscreen control panel mounted on the mobile stand and the monitor cart. It provides access to the same, synchronized controls found on both units. Additionally, the SmartArchive function gives surgeons instant, simple access to the latest patient data.

Fit for the future
The Vision Center features a modular software architecture, ensuring maximum flexibility. This interface can be easily upgraded and expanded with additional software modules without the need for hardware changes.
Seamless integration
The interface, Ziehm NetPort, enables easy integration into existing IT networks. X-ray images saved in DICOM 3.0 format are transferred to the PACS, and patient data can be exchanged with HIS/RIS. X-ray images can be retrieved at any time. They can also be backed up to DVD or USB stick and printed on transparencies or paper.

Wireless freedom
Ziehm Imaging’s Wireless Freedom Concept bundles three different opportunities to increase efficiency and safety in the OR. Firstly, WLAN allows operators to transfer images wirelessly to the PACS from any location. Secondly, with the Ziehm Wireless Video option, live images can be transferred to wall- or ceiling-mounted monitors in real time for even greater flexibility. Thirdly, key functions such as X-rays can be actuated with the wireless dual-plus footswitch. The footswitch has the added bonus of increasing safety by reducing cables on the OR floor.
04/Reduce exposure significantly with the next-generation SmartDose

The Ziehm Vision FD is designed to meet growing demand among surgeons and their staff for minimized dose exposure without compromising on image quality. New filtration enhancements and advanced anatomical programs deliver on these demands, making this device perfect for dose-sensitive applications.

→ Best image quality. Minimized dose.
The comprehensive concept consists of a broad, clinically proven application portfolio to address daily challenges of low dose and high image quality. With significant dose savings, Ziehm Imaging sets the benchmark in user-friendly adjustments of dose exposure. Our latest improvements in SmartDose help display even the smallest details of complex anatomical areas and reduce dose with intelligent pulse regulation and optimized anatomical programs. Furthermore, dedicated SmartDose functions significantly reduce exposure in pediatric surgery.

→ Beam Filtration for reduced skin entrance dose
Our feature-rich SmartDose Concept now comes in a further developed version with the groundbreaking Beam Filtration technology. The new dose reduction technique for an optimized X-ray spectrum supports our enhanced CMOS imaging chain. This combination enables an exceptional reduction in the skin entrance dose for all CMOSline systems. In a nutshell, the premium line of Ziehm Imaging C-arms provides excellent image quality with a lower dose.

LASER POSITIONING DEVICE
Integrated in flat-panel or i. l. and generator housing for accurate and dose-free positioning of C-arm

ANATOMICAL PROGRAMS
With automatic optimization of dose and image quality for best results

LOW DOSE MODE
In all anatomical programs for particularly dose-sensitive procedures, e.g. in pediatrics

REMOVAL GRID
To reduce dose in pediatric and other dose-sensitive procedures

REDUCTION OF PULSE FREQUENCY
Manually or fully automatically to lower the accumulated dose

HIGH-SPEED ADR
For intelligent, fast regulation of pulse rate to lower the dose level

PREMAG
For exposure-free magnification of X-ray images

OBJECTION DETECTED DOSE CONTROL (ODDC)
To automatically analyze the area of interest and minimize dose while optimizing image quality

ZAIPI ALGORITHM AND FILTERS
To display fast-moving objects like guide wires and even the smallest vessels in razor-sharp image quality

AUTOMATIC ADJUSTMENT
For large patients – with no additional increase in dose

REMovable COLLIMATORS
For exposure-free positioning of collimators

BEAM FILTRATION
For reduced skin entrance dose without compromising on image quality

### Maximize Your Uptime

Make sure to get the best service for your daily business.

Rely on Ziehm Imaging for flexible and fast service to stay at the cutting edge of technology. Tailored service packages, remote service and individual upgrade paths keep you competitive in your daily hospital routine.
Ziehm Vision FD
The new imaging standard for surgery

1 The technology Beam Filtration reduces dose exposure for all CMOSline systems in comparison with conventional filtration techniques (status before September 2017). Data on file. Results may vary.

2 The SmartDose Concept includes a variety of hardware and software features. Due to regulatory reasons, the availability of each feature may vary. Please contact your local Ziehm Imaging sales representative for detailed information.

3 CMOSline represents a system configuration that is based on a Ziehm Imaging CMOS flat-panel detector.
